

KEEP YOUR YARD GREEN AND WATERWAY CLEAN

Help our community protect our streams and waterways from excess nutrients and chemicals by following these easy steps

- ✓ Do a soil test to determine if additional nutrients are needed
- ✓ Use slow release, phosphorus-free products
- ✓ Don't fertilize if it is likely to rain within two days
- ✓ Don't apply within 75 feet of waterways
- ✓ Select plants that require minimal watering to prevent runoff
- ✓ Adjust sprinklers to keep water on lawns and landscaping
- ✓ Overwatering lawns and gardens cause nutrients to leach out
- ✓ Store pesticides and fertilizers in a secure covered area
- ✓ Dispose of chemicals properly and never pour them down the drain
- ✓ Use porous materials like brick and gravel instead of concrete
- ✓ Make sure to follow all manufacturer's instructions
